PROFESSIONAL SUMMARY

Computer Engineering graduate and Security Researcher with hands-on experience in web application security testing, vulnerability assessment, bug bounty hunting, and responsible disclosure. Experienced in identifying and validating security vulnerabilities, conducting reconnaissance, API security testing, and preparing technical reports. Seeking opportunities in Application Security, VAPT, and Security Research.

SECURITY RESEARCH EXPERIENCE

Independent Security Researcher

- Ultra Mobile: Reproduced and validated CVE-2025-55184 (P2 – High Impact).
- Xael: Discovered and documented a high-severity JWT vulnerability; earned \$500 bounty with detailed technical report and proof-of-concept.
- GEA Group: Reported exposed Google Maps API key vulnerability; recognized in Security Hall of Fame.
- Atom: Discovered and responsibly disclosed a Cross-Site Request Forgery (CSRF) vulnerability impacting authenticated workflows.

PROJECT DYNAMO FELLOW

Handshake AI | Remote

Aug 2026 – Present

- Designed challenging, realistic command-line tasks to evaluate AI agents' ability to explain, execute code, and solve complex multi-step problems.
- Designed and evaluated security and digital forensics tasks, including investigation, analysis, troubleshooting, and evidence-based problem solving.
- Developed reproducible technical task environments with clear requirements, expected outcomes, and validation criteria.
- Applied cybersecurity and adversarial thinking to identify weaknesses and improve task quality.

TECHNICAL SKILLS

Cybersecurity: Web Application Penetration Testing (WAPT), VAPT, OWASP Top 10, API Security, Reconnaissance, Vulnerability Assessment, Bug Bounty Triage, Responsible Disclosure

Tools: Burp Suite, Nmap, Nuclei, Metasploit, Nessus, Bloodhound

Platforms: Windows, Kali Linux, GitHub, n8n

PROJECTS

MCP-Sentinel — Autonomous Security Testing Agent for AI Agents & MCP Servers

- Built an autonomous n8n-based agent that pentests other AI agents and MCP servers, enumerating tool manifests via the MCP initialize/tools-list handshake before running automated security checks.
- Implemented auth/JWT tampering checks, over-scoped tool-permission audits, secrets-in-config scanning, and prompt-injection-to-action testing across dedicated check branches.
- Escalated the Scope Audit check from detection-only to genuine proof-of-exploit: executed a real unauthorized action against a test target and verified persistence to produce a Confirmed-Exploit finding.
- Added Tool Poisoning and Schema Drift checks to catch false safety claims in tool manifests (e.g., misleading "read-only" descriptions) and silent tool-definition changes between calls.
- Validated the framework against a real external MCP server with a deliberately planted vulnerable tool, then built a reasoning/triage agent and report generator producing disclosure-style Markdown vulnerability reports.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional
- Advent of Cyber 2025 — TryHackMe

VIRTUAL EXPERIENCE

- Deloitte — Cybersecurity Simulation: Conducted digital forensic investigations and cyber risk assessments.
- Commonwealth Bank — Cybersecurity Simulation: Executed incident response procedures and penetration testing tasks.
- Datacom — Cybersecurity Simulation: Analyzed APT scenarios and attacker techniques. Mastercard — Cybersecurity Simulation: Designed phishing simulations and security awareness strategies.

EDUCATION

Dilap Institute of Technology

Mumbai, India

B.E. in Computer Engineering — CGPI: 6.84 | May 2026

Birla College — Higher Secondary Certificate (HSC) — 53.40%

2022

N.R.C. School — Secondary School Certificate (SSC) — 86.80%
